## USER AND OPERATING INSTRUCTIONS - SAFETY WARNINGS

All products of the Magyarajándék Webshop are made by Kata Ásmány and Péter Off in their own workshop.

The products are not intended for small children, are not suitable for their hands or mouth, and are too fragile for a small child to play with.

## MUSIC BOX

### **Use**

The music boxes are made of wood, in which a mechanical metal structure plays the music. All music box juried work of art, decorative object.

The metal structure can be compared to a simpler clock structure, the sound is produced by the cooperation of small parts.

The music inside can be heard by carefully, but usually faster, rotation of the rotary lever, or by carefully pulling up the key. Both the tree and the structure are sensitive to being dropped, as well as to pulling, downward pressure of the turning lever, or over-tightening of the key.

The paper tape of the ribbon music box is sensitive to creasing. The tape should be fed into the hole on the side of the music box. If the crank does not forward the tape, it must be pushed a little further into the structure. Make sure that the rewinding tape does not slide into the structure, because the double layer of paper will destroy the mechanism!

### **Individual orders**

The mechanical structure consists of very small, fixed elements, so the music cannot be changed. The structure of the tape music box is also fixed, but it does not emit sound by itself. In this mechanism, the lamellae are able to swing in the holes in the paper tape, and this makes the music sound, just as the antique, hole-punched verklijks worked. Since the paper tape is replaceable, this version is suitable for fulfilling individual orders. (Not all music tracks are suitable for such a transcription, so you need to consult by e-mail before ordering. The music box can play approx. 20 seconds of melody.).

## CANDLE

### Use

In our online store, you can buy our block candles, including the models with openwork wood inserts. Our candles are juried works of art and decorative objects.

After lighting the candle, it burns inward, that is, the candle's mantle remains during burning, and as the wick burns down,

it illuminates the entire candle body. Through the openwork patterns - with clever placement - the pattern itself

it can appear on the surface of a wall or furniture.

- If the flame of the candle smolders, then cut back the wick, usually it should not be longer than 8-10 mm.
- If the candle is deeply burnt, use a gas lighter (long) match and light the candle by tilting it.
- If the wick has burned through, we can put tea wicks in the resulting cavity so that we can continue to use our candle.

### Safety warnings

- Do not throw the match used to light the candle into the candle! The match can catch fire and burn the side of the candle, or even the also wooden inserts. This is a fire hazard.
- A burning candle should never be left unattended!
- Don't put candles in a drafty place!
- Do not place the candle near flammable substances or objects that emit heat!
- Leave a distance of at least 7 cm between two burning candles!
- Keep candles and matches out of reach of children!

## CHALK HOLDER

### Use

The chalk holder is primarily designed for children attending Waldorf kindergartens and schools, their parents and teachers.

Can be ordered with Stockmar chalks or empty. It is suitable for storing hand bricks (brick chalks) and, in the case of the school version, pencil chalks. Treated with natural oil, mainly oak wood.

## WALDORF CALENDAR

### **Use**

The calendar is primarily intended for children attending Waldorf kindergartens and schools, their parents and teachers.

It can be mounted on the wall and can be adjusted by turning the two circles: we can use it to indicate the days and qualities of the week daily, and the months and qualities of the year each month.

When mounting, after drilling the first screw, it is worth measuring the location of the second, fixing screw exactly, so that the calendar does not move during the rotation.

## CHRISTMAS ORNAMENT

### **Use**

Christmas tree decorations are made of thin wooden boards, so they are fragile. The 3D spatial Christmas tree decorations are glued together from three layers, which is why the motifs are visible not only next to each other, but behind each other in space.

A ribbon or string can be tied into the available hole, and the decorations can be hung in a window or on a pine tree.
